

CHLORELLA MANNA™

Chlorella is one of the three most common types of single-cell micro-algae consumed as a food source. Algae, such as chlorella, use the sunlight, along with minerals from the ocean and carbon dioxide from the atmosphere, to produce all the complex molecules of life: proteins, carbohydrates (starches and sugars), lipids (fats), nucleic acids (DNA and RNA), vitamins, phytonutrients, chlorophyll, and many other pigments. Algae stands at the base of the food chain and is, in a very real sense, the ancient biological foundation upon which most of life on Earth now depends.

Chlorella is a single-cell freshwater green algae. It has a tough cellulose cell wall (20% of the cell) and a well-defined nucleus rich in nutrients (80% of the cell). The cell walls of Chlorella Manna™ are “cracked” to make the nutrients inside the cells bioavailable. This makes Chlorella Manna™ superior to many other chlorella sources. Chlorella Manna™ is the highest quality, pure, human grade chlorella available. Our beloved animal family members deserve the best nutritional support possible!

The therapeutic benefits of Chlorella Manna™ cannot be overstated. Chlorella contains phytonutrients, vitamins, minerals, trace minerals, antioxidants, proteins, and amino acids to support longevity and superior health.* The nutrients in Chlorella Manna™ are entirely bioavailable because they are from a whole plant food. A superfood!

The minerals and phytonutrients in Chlorella Manna™ increase the body's resistance to degenerative illness and disease.* The same ingredients provide iodine for thyroid health, important trace minerals from the ocean, and radiation and heavy metal chelation.*

Chlorella truly shines in its ability to promote detoxification.* The chlorophyll in chlorella oxygenates the blood, thus cleansing it of microbials and boosting the immune system.* Oxygenation also increases energy production.* These processes enhance detoxification in cells by allowing cells to release toxins more readily.* The fibrous cell wall of chlorella then binds with toxins and helps carry them out of the body.*

Chlorella Manna™ contains Chlorella Growth Factor (“CGF”) which is a phytonutrient containing amino acids, polysaccharides, beta-glucans, vitamins, and an abundance of nucleic acids (RNA and DNA). CGF appears to support the RNA/DNA functions responsible for the production of proteins, enzymes, and energy at the cellular level, thereby stimulating a number of benefits, including cellular repair and detoxification, immune function, the efficient use of oxygen in cells, and the growth of friendly intestinal bacteria.*

Chlorella's promotion of beneficial intestinal bacteria aids digestion and prevents inflammation resulting from the ingestion of allergens.* Studies have shown up to a 400% increase in friendly bacteria after sustained chlorella use.*

Compassion Circle begins with the best ingredients nature has to offer – ENTIRELY pesticide free and containing NO genetically modified organisms (non-GMO!). Ingredients must pass actual tests to verify non-GMO status and ensure they are 100% free of pesticides and

irradiation. Chlorella Manna™ is grown in indoors tanks filled with purified water in a carefully sterilized and controlled system from start to finish, resulting in a product free from heavy metals, pesticides, microbes, and other pollutants (such as chemtrails and radiation). It is carefully dried at low temperatures to retain life force, enzymes, and other heat-sensitive elements. All Compassion Circle products are gluten free and vegan. To preserve the natural goodness of our superfood products, they are bottled in amber glass with metal lids and oxygen absorbers.

When chlorella is first introduced in the diet, only a small amount should be given. As little as one-third a suggested serving is appropriate. The body should be eased into the cellular detoxification that Chlorella Manna™ offers. Slowly increase the serving amount up to the recommended serving size over a week or so.

INGREDIENTS: 100% pure broken cell wall chlorella (*Chlorella vulgaris*)

SUGGESTED USE (POWDER):

For mammals: Recommended for dogs, cats, rats, rabbits, guinea pigs, hamsters, mice, ferrets, squirrels, other mammals, and human animals, too! Mix approximately one part powder to two parts purified water, fresh juice or fruit, such as a banana (for flavoring) to make a mush. As with any natural whole food, only serve a small quantity at a time, as exposure to sunlight will degrade the nutritional content over time. Daily serving depends upon size of animal. Examples are: rats: 1/8 tsp.; cats,* rabbits: 1 tsp.;small dogs (5-20 lbs.): 1-2 tsp.; large dogs (45 lbs. or more): 1 tbs.

*It is best to also give cats 1 teaspoon of cranberry powder per day when feeding chlorella due to the alkalinity of spirulina.

For small fish or baby fish: Approximately what they can consume in about five minutes. For large fish such as adult koi, we recommend our chlorella/spirulina VeganTabs™

SUGGESTED USE (VeganTabs™):

For rats and other small rodents: Chlorella Manna™ VeganTabs™ may be used as treats, served in a small dish, or mixed with other dry foods. As with any natural whole food, only serve a small quantity at a time, as exposure to sunlight will degrade the nutritional content over time.

For koi and large goldfish: Approximately one handful of VeganTabs™ per 10 fish, or however much they can consume in about five minutes. Koi and goldfish have teeth so will chew VeganTabs™ and not just swallow whole. For smaller goldfish, baby koi, and fish who do not have teeth, use Chlorella Manna™ powder.

SUGGESTED ADJUNCTS: A whole foods, organic/non-GMO vegan diet (visit VeganPets.com for more dietary information), including specific supplements (if necessary) for your species of animal, clean purified water, fresh air, full-spectrum light, physical exercise, and lots of love. We wish you and your companion animals great health and happiness always!
